We are planning to prepare the wipes (cotton gauze presoaked in hexane placed in jars). Is 25 sufficient? I'll ask Brent to take them over to the regional office with his supplies. We should be able to meet a 2-week turnaround from receipt for preliminary results.

Thanks, Jennifer.

No, Kendall did not provide a QAPP, and when I asked his lab they said that they could help us write one. I think that's also when they sent us all their analytical SOPs. I can press Kendall for a QAPP if you would like, but I wasn't sure if it was easy enough to just use an existing one from a past PCB Light ballast inspection? Although, I do not have one, maybe you guys have one? Just let me know how to proceed here...

Name of project: Sky Valley Education Center PCB Inspection

Solvent: Hexane- I think Gerald told me he pre-cleans the gauze and then pre-soaks in hexane and supplies it as a wipe in a jar, correct?

So, if we don't use sample tags, do we define the sample ID criteria in the QAPP?

Also, Kendall would like to know who the lab point of contact is for him- in case for some reason he needs to reach you directly. Who's contact info should I provide?

Thanks!

Thanks Michelle. I would be best to work with Gerald and Brent on the supplies and other questions – CC'd. We don't use sample tags in R10.

A few questions: Did Kendall provide a QAPP so we know what criteria needs to be met? What solvent for wipes? What is the name of the project so I can start a file?

Oh! Thank you for the reminder.

Yes- so Kendall Moore will be arriving on March 21 for the inspection.

He needs 24 wipe sample jars with gauze. Plus 2 cases of 4oz jars for bulk samples of opportunity. Plus gloves, and a scraping tool (metal spatula, or similar or even wooden tongue depressors), sample tags, Chain of Custody's, coolers and any other sample collection supplies if you think of something else.

He would like to use the R10 lab for analysis and requests a 2 week TAT for preliminary results. Gerald previously told me that he could work with that timeline, but I want to verify that now that we're setting plans into motion.

And how do we coordinate delivery of supplies to Kendall, and delivery of samples to the lab? Do I need to go to Manchester, or can it be coordinated through the Seattle office? I thought there was a secure room we can lock the samples in overnight, for instance?

Thanks!

Hi Michelle,

Do you have any new details on the Region 5 inspection for PCB and MEL support?
Thanks!
